## Take the Lead in Acoustics

The ability to account for coupled physics phenomena lets you predict, optimize, and virtually test a design under real-world conditions – even before a first prototype is built.

Page: 593

For the elastodynamic wave equation discussed in Appendix A.4 in Ref. 1, the expressions for matrices  $\tilde{\mathbf{L}}_1^\pm$  and  $\tilde{\mathbf{L}}_2^\pm$  in Eqs. (A32) and (A33) must be multiplied by  $\pm 1$ . In other words, the signs of  $\tilde{\mathbf{L}}_1^-$  and  $\tilde{\mathbf{L}}_2^-$  have to be changed, whereas the signs of  $\tilde{\mathbf{L}}_1^+$  and  $\tilde{\mathbf{L}}_2^+$  remain unchanged. With these corrections, matrix  $\tilde{\mathbf{L}}$ , defined in Eq. (A5), fulfills the

symmetry property formulated by Eq. (A6). The corrections have no consequences for Eqs. (A36)–(A38).
