Local variables identification in participatory urbanism: recent case studies in Valencia

Maieutic is the Socratic method by which new knowledge is created by formulating a series of questions followed by thoughtful responses. It is a kind of birthing through a process. First, questioning will lead to the awareness of ignorance. Secondly – and consequently – the desire to repair this lack of knowledge will be awakened and; therefore, the individual is better braced for learning.

If we transfer this way of doing to urban design and planning, and we understand the polis as the place where citizens come together, we can imagine the maieutic of the city as a great debate, in which each of the inhabitants would raise questions leading to collective reflections: How can the city be safer? How can we live in a healthier environment? How can we coexist all? Following the analogy with the Socratic method, the answers would be diverse and make the cities' deficiencies evident. Subsequently, and above all, the tools should be mediated to reach a proposed solution of consensus.

Those mentioned above are, nonetheless, the fundamental traces of participatory urbanism: A way of making a city now thoroughly studied and profusely put into practice, with its origin in European urbanism in the second half of the 20th century. Thus, participatory urbanism, placemaking or tactical urbanism can be considered the contemporary materialisation of a maieutic process that allows new knowledge to emerge collectively.

As in the Socratic method, the process is critical in participatory urbanism since the actual social construction of knowledge resides in it. The previous questions by a hypothetical citizen could be asked in entirely separate locations; they will be answered in a certain way, incorporating local, cultural, and social traits to determine the result.

Thus, this text aims to highlight the local variables that have recently shaped three case studies in Valencia. It is about iden-

tifying the factors that link the proposal to its context, in whose results the specific and global challenges are combined.

The contemporary city and urban processes

The contemporary city cannot be described without alluding to the modern urban model. It had to be reconsidered in the second half of the 20th century for various reasons, but among others, the failure of radical functionalism, the lack of variables typical of the cultural and technological identities, the recovery of tradition and memory, and consequently the revision of its formal language¹. The contemporary city has become complex in opposition to the orthodoxy of previous decades, thus incorporating compactness and diversity. The urban planners of the 1920s and 1930s who attended the CIAM listened to a functionalist discourse, while the ones who, three decades later, listened to the members of Team 10 started observing and designing the city incorporating social and cultural traits that define the specificity of urban space.

Another variable adding complexity to the contemporary city in late modernity is reflexivity². Beyond a mere ludic citizen engagement, knowledge, action, and responsibility characterise reflexive modernisation, making city maieutic a necessary tool in constructing urban environments. The active role of citizens in the search and reshaping of modern definitions demanded the implementation of social and cultural variables in urban design. To do so, design processes used participatory tools, placemaking, or tactical urbanism to reflect on space collectively. The early definitions of participation in the late 60s already insisted on a collective action dimension³. Grading participation as non-participation, tokenism, and citizen power, they push city maieutic towards active maieutic to a point where words turn into actions. Participation should then aim to build lasting vigorous collective action instead of being used as an occasional measuring of

Figure 2 – *El Botànic es mou*: “Move around” workshop, 2016
 Source: <https://www.facebook.com/elbotanicesmou/>

citizens’ opinions. In the Spanish context, the implementation of social and cultural variables in urban space design started with the democratic transition in the early 1980s. Promoted by the appearance of citizen movements committed to improving the quality of urban space, the model of city design timidly began to incorporate dialogue with citizens. Through opinion columns in the newspapers, project exhibitions, demonstrations or posters, the collective debate began to take shape and inform the political and spatial decisions of the city⁴.

Recent actions on the Spanish Mediterranean coast

The city of Valencia is not a unique case regarding the changes that have taken place in the management of public resources. Many other European cities have incorporated participatory processes into their urban design policies⁵. However, the leading role of the citizen was possible thanks to a new form of governance that came with a political change in the Valencia City Council in 2015 and produced a certain effervescence in the participatory dimension.

Some authors have labelled this boom in the direct participation of citizens in the creation and management of public space in Valencia as “participatory reactivation” and conclude that it is a complex, heterogeneous phenomenon whose results play a fundamental role as a catalyst for public administration⁶.

a. El botànic es mou.

Diversity and Consensus around a Public Square

In October 2016, the group of urban planners and landscape architects “La paisatgeria” took charge of coordinating a work in which the residents of the Botànic neighbourhood of Valencia, the local administration, and the coordinating technicians participated⁷. The objective was to develop a participative public space and mobility strategy in an area that was still nestled in a historical and privileged urban environment that had a problem with a possibility for improvement.

Given the scarce participatory culture then present in the city of Valencia, the process paid extra attention to the methodologies used: activities and tools that would pique the interest of a wide variety of residents, alternating digital and face-to face media. The children and young people had specific activities as well as the older population.

The work contained five phases: definition of the map of actors, protest launching party (Figure 1), participatory self-diagnosis, lines of action preparation, and drafting of final urban strategies document.

The actions undertaken included four open workshops (Recognise the Botànic: tour with a critical view; Move around the Botànic: work on the movement habits of neighbours (Figure 2); Imagine the Botànic: debates, proposals, consensus; Re-

Figure 4 – Design by E. Quintana based on the participative process, 2018

make the Botànic: results and presentation of lines of action), three working group meetings, an information office open for four months in the market and the neighbourhood library, surveys, work sessions in schools and personalised interviews with interest groups.

The participatory process highlighted a strong civic will to change the mobility and public space use model (more vegetation, better cleanliness, more meeting spaces). Above all, it was valuable to find a consensus regarding the environment of the municipal market (until now used as a vehicle parking esplanade). In addition, thanks to the experience, new initiatives were born, such as re-purposing vacant lots as urban gardens. In addition, it showed that the citizens' desires did not necessarily demand heavily invested actions.

b. Sembra Orriols.

Collaborative design and shared authorship

The financial crisis of 2008 in Spain forced the appearance of new urban design models and built-environment practice methods. After the urban construction fervour that extinguished the urban dialogue, young architects adopted new ways of city making, fed by citizen intelligence and collective knowledge⁸.

In the period 2015 to 2019, Carpe Studio developed a three-phase project in the neighbourhood of Orriols (Valencia):

Figure 5 – Walk approaching the Tinglado from the surrounding areas, 2020
Source: <https://www.facebook.com/La-Remor-112419790312285/>

Activa, Sembra and Crea (Activate, Seed, and Create). In 2015, during the Sembra Orriols phase, the “Plaza de la Ermita” case presented a significant example of how civic conversations can culminate in spatial implementation. In a 2015 “bottom-up” project initiated by local agents, the young Carpe Estudio collected citizens' visions for the underused space around a historical chapel during multiple conferences and participatory events. In these conversations, they made sure that the maieutic also incorporated the social and political agents of the neighbourhood to increase its impact (Figure 3).

In addition to common tools used in previous decades to build public debate (professional forums, general discussions, press articles), they developed others such as co-design workshops supported by architectural prototyping, installations in public spaces or festive cultural activities. Bringing citizens closer to the ways of doing reserved for experts helped to bridge the tacit gap and to incorporate the views of a broader population sample. Finally, due to the general acceptance of the collective proposal, the city council decided to incorporate it into a new public space construction in the demanded location (Figure 4).

c. Shed 2 of la Marina de València.

Re-inventing port infrastructure

The transformation of maritime fronts is currently one of the most relevant issues in port cities. Recent changes in the functioning of port activity have facilitated the contact of public space with water, leading to vast urban redevelopments in port cities.

In Valencia, after the completion in 2007 of the America's Cup, the port's marina surroundings fell into disuse; the sheds built for the sporting event were abandoned and access to public space became limited. Following a change in political perspective in 2015, a new management entity in the marina decided to open the waterfront space to citizens through spatial improvements.

The culmination of this process was the recovery and improvement of the port's historic sheds. These open structures, traditionally used as temporary warehouses, have been used spontaneously in recent decades as shaded spaces for diverse civic activities. However, its connection with the urban fabric is weak, given the lack of design in the adjoining public spaces.

In 2019, the "Ideas competition for the design and coordination of the placemaking process for the humanisation of the environment of Tinglado no 2, in la Marina de València" was a declaration of intent on understanding urban renewal. The contest called for a multidisciplinary team that would incorporate the dialogue between technical and social profes-

sions to build a collective narrative with citizens, culminating in an execution project to improve the square.

Although the project is unfinished, the co-design phase carried out by Grupo Aranea and El Fabricante de Esferas produced an exciting perspective on how to converse between the historical past of a place and its urban future (Figure 5). Due to the dynamic nature of the enclave, citizen conversations were performed through spatial drifts from the nearby neighbourhoods. Instead of focusing only on the object (building), the project focuses on the human experience when spatially and narratively approaching the building. The stories collected during the oral and graphic conversation sessions included looking back – the seafronts of Joaquín Sorolla, elderly stories, waterfront historical pictures – with children's drawing workshops or modern media interviews by teenagers (Figure 6). Combining words and images in maieutic processes shows a not-so-evident methodology to collectively make the city draw on citizens' reflections and natural abilities.

Conclusions

The previous examples of urban space design incorporating citizen participation show the perspective present on the Spanish Mediterranean coast. It is a perspective that tries to improve public space from the collective construction of meaning and stories, and that uses co-designed tools anchored in public life conversations guided by technicians who take a role that is close to activism.

The cases in this article highlight approaches to common Mediterranean urban questions on the urban and regional city scales. In El botanic, public squares and markets become the ground on which consensus within a diverse context is reached. Citizens of the same neighbourhood discuss and reach conclusions to a shared concern. The case of Orriols also works on the neighbourhood scale and incorporates the notion of “dissolved” authorship: several architectural practices coordinated the participative process; citizens conformed to the program requirements, and a landscape designer collected the previous work and realised their collective aspirations into a square. The case of the Tinglado in la Marina represents a collectively reinvented infrastructure affecting the regional scale. It combines maieutic through citizen interaction with scale, movement and representation, showing how participation can also support great urban challenges.

These cases show similarities with other contexts in southern Europe that have had similar challenges: democratic transitions, a significant tourism increase, financial crises, or transformation of maritime fronts. Sharing and comparing the diverse ways of deploying maieutic in the Mediterranean city can strengthen the construction of a collective urban space narrative in southern Europe within the European perspective.

Abstract

La popolarità dell'urbanistica partecipativa negli ultimi decenni è aumentata notevolmente nell'Europa meridionale. Somiglianze geografiche, politiche e finanziarie hanno portato allo sviluppo di una variabile locale che nasce dalla maieutica nello spazio pubblico. È logico pensare che i modi di abitare lo spazio determinino i processi di costruzione collettiva. Accanto a questo, c'è un modo particolare di immaginare lo spazio, discuterlo e concordarlo. In Spagna, i processi partecipativi sono stati inseriti nell'agenda urbana con un certo ritardo rispetto ai paesi dell'Europa centrale e settentrionale. In effetti, fino a buona parte degli anni '80, la pianificazione urbana partecipata dai cittadini era di carattere rivendicativo. In questo articolo vengono presentati tre recenti esempi di progettazione urbana a Valencia attraverso la riflessione collettiva. Il caso del quartiere El Botànic è una delle prime esperienze con una scala di quartiere promossa dall'amministrazione locale. Ha messo in evidenza la capacità di consenso emersa da una popolazione diversificata. Il caso di “Plaza de la Ermita” nel quartiere di Orriols illustra le strategie che sono nate in reazione alla crisi finanziaria del 2008. Infine, il concorso di idee per il placemaking di Tinglado n° 2 della Marina de València presenta riflessione istituzionale sulla trasformazione dei fronti marittimi. Il confronto di questi tre casi permette di tracciare una storia su come l'urbanistica partecipativa ha risposto alle caratteristiche socio-culturali del contesto dell'Europa meridionale. Dimostrano come l'adattamento dei metodi e delle azioni ai fini e ai risultati renda la cultura locale compatibile con le metodologie partecipative.

Figura 1 – La città nel verde: progetti per la città-regione lombarda da Milano a Brescia

Le tesi di laurea di seguito sinteticamente illustrate affrontano il tema della ridestinazione e della riconfigurazione di alcune grandi aree dismesse collocate lungo la storica linea ferroviaria Milano-Brescia, parallela alle consolidate direttrici stradali che conducono verso est.

La recente alta velocità Milano-Brescia e, soprattutto, la linea ferroviaria regionale cadenzata fra Milano e Treviglio avvicinano le due città capoluogo e i poli di secondo ordine situati lungo il percorso, dove si attestano le stazioni di Pioltello, di Cassano d'Adda e di Treviglio.

In questi centri si trovano ampie aree libere, la cui conversione consentirebbe di rafforzare il loro ruolo e la loro identità per la costruzione di una città policentrica che comprenda un territorio esteso ma ben collegato, costituito dall'alternarsi di centri consolidati, di elementi naturali e di una campagna ancora ricca e produttiva.

Biografie / Biographies

Lamberto Amistadi, *Associate Professor in architectural and urban Design at the Department of Architecture of the University of Bologna. He is deputy director of the online scientific journal "FAMagazine", co-director of the series "TECA. Teorie della Composizione architettonica", Clean. Along with Ildebrando Clemente, he founded and directs the series "SOUNDINGS: Theory and Architectural Openness" (Aión). He is author and editor of several publications.*

Michele Caja, *Associate Professor in Architectural and Urban Composition at Politecnico di Milano, AUIC School-ABC Department. PhD in Architectural Composition at IUAV in Venice (2005). Teaching activities: ETH Zürich, Facoltà "Aldo Rossi" Cesena; FHP Potsdam. His research focuses on the relationship between theory and contemporary design, referring in particular to the Italian and German debate. He is author and editor of several publications.*

Renato Capozzi, *architect, graduated at the Faculty of Architecture of Naples. PhD in Architectural and Urban Composition at the IUAV (2004). Associate Professor in Architectural and Urban Composition at the Department of Architecture of the University of Naples "Federico II", member of the teaching board of the PhD in Architecture. Teaching staff of the PhD in Architecture and builds "La Sapienza" University of Rome. He is author and editor of several publications.*

Ildebrando Clemente, *graduated in Architecture (2001) at the IUAV, Istituto Universitario di Architettura di Venezia. PhD - IUAV 2005. Associate Professor in architecture and urban design at the Department of Architecture, University of Bologna. His research deal with the connections between meaning and project in contemporary architecture in their implications with theory, composition and representation.*

Francesco Collotti, *Full Professor Florence University. Visiting ETH Zürich (1994-1996) and TU Dortmund (2000). Professor SSEAU Naples and Politecnico di Milano-Facoltà di Architettura Civile. Visiting Professor in China at Jinan University 2012/2014. Full professor at EMADU Ecole Euromed d'Architecture, de Design et d'Urbanisme - Université Euroméditerranéenne Fès. Cordinator PhD Programme in Architecture, Florence University.*

Roberto Collovà, *architect, designer, photographer. He taught Architectural Design Studio at the School of Palermo, at the Academy of Mendrisio USI (2001/2006). Main awards: 1991 IN-ARCH, 1st prize of the Diagonal International Competition, Barcelona 1989, Gold Medal of Italian Architecture, 2003, Commissioner Mies van der Rohe Award 2005, Advisor of the BSI Swiss Architectural Award 2008 and of the editions from 2011 to 2015, of the Young Architects Program MAXXI / MoMa PS1. His works and his essays are published on several architectural magazine.*

Francesco Deflippis, *Associate Professor in Architectural and Urban Design at Polytechnic University of Bari. He is a member of the Academic Board of the PhD Program "Design for Heritage. Knowledge and Innovation" and the scientific coordinator of the research group "Design for Heritage". As a member of the scientific committee he organized and took part in several architectural exhibitions, workshops and summers schools, both in Italy and abroad.*

Débora Domingo Calabuig, *MA in architecture at the School of Architecture of Valencia (E) and l'École d'Architecture de Paris-La Défense (F). PhD at Universitat Politècnica de València (UPV). Full Professor at the Department of Architectural Design at UPV. She has taught in all graduate year levels, also in postgraduate and master degree. She supervises assiduously PhD research theses and other research dissertation. Since 2012 Assistant Director for Research of the School of Architecture and Managing.*

Antonio Esposito, *architect, graduated at the Politecnico di Milano, Associate Professor in architecture and urban design at the Department of Architecture, University of Bologna. Published several studies on Portuguese contemporary architecture, a reality with which he has forged a relationship of cultural confrontation since more than thirty years His other research and studies on cities and on the state of contemporary architecture have produced numerous writings and essays.*

Francesco Saverio Fera, *MA at the Politecnico di Milano. Adjunct Professor at the Charles E. Daniel Center in Genoa, Clemson University S.C. PhD at the Architectural School of the University of Genoa. Full professor in Architectural Composition at the School of Architecture of the*

University of Bologna - Cesena Campus. Former Coordinator of the Master Degree in Architecture of the University of Bologna - Cesena Campus.

Massimo Ferrari, architect, PhD in Architectural and Urban Composition at IUAV in Venice, is Associate Professor at Politecnico Milano. From 2010 to 2017 he was editor of the architecture magazine «Casabella». Curator of publications on architecture and art, he mainly focuses his research on the architectural project. Among the several exhibitions he has curated, in July 2015, as part of the Triennale Xtra project for Expo 2015. He is author and editor of several publications.

Fabrizio Foti, architect, PhD in Urban and Architectural design, from 2010 he teaches into the Siracusa Faculty of Architecture. From 2017 he is Researcher in Urban and Architectural design for the ICAR Department - Unict. Visiting Professor and visiting researcher for the Facultad de Arquitectura y Urbanismo (Pontificia Universidad Católica del Perú, Lima). Lectures in several Italian and foreign universities. He is author and editor of several publications.

Hans van der Heijden, has a portfolio of housing, urban design, reuse, cultural buildings and research. Holds the chair in Contemporary Architectural Practice at the University of Liverpool. Professor at University of Cambridge, UK. His practice made its name by approaching renovation and new build as equivalent tasks. Has worked on various architecture and art commissions and teaching projects, in addition to his work on Dutch projects. He is author and editor of several publications.

Martina Landsberger, Associate Professor at the Department of Architecture, Built Environment and Construction Engineering (ABCE) of Politecnico di Milano. MA at Politecnico di Milano Ph.D. IUAV Venezia. She has lectured and participated to critics at Italian and foreign Universities and Institutions. Member of Bachelor's and Master's degree examining committees and from 2018 she is member of the board of DABC Ph.D. She has participated in research projects of national importance.

Riva Lava, Assistant Professor at the School of Architecture of the National Technical University of Athens with the subject Architectural Design and Heritage. Ph.D. in architecture Aristotle University of Thessaloniki. She taught the MA course at the International Hellenic University, architectural design at the University of Thessaly, architectural and urban design at Pratt Institute New York, and communication at the Nafflion Fine Arts School of the University of the Peloponnese.

Gino Malacarne, Full Professor in Architectural and Urban Composition. MA at IUAV University of Venice where he also taught. Since 2005, he has been teaching at the University of Bologna: from 2005 to 2012 at the "Aldo Rossi" Faculty of Architecture where in those same years he held the position of Dean. He has carried out intense design work (competitions, assignments and research projects) whose results have been

presented at architecture exhibitions and published in various books and magazines.

Mar Muñoz Aparici is a practising architect developing design-driven research on public space from urban and architectural perspectives. Her PhD research focuses on cultural building design as a tool to strengthen public life and is embedded in the CA2RE+ network. She holds a Masters from TU Delft. Has been invited to teach at the Catholic University of America, Polytechnic University of Valencia and CEU Valencia. She is author and editor of several publications.

Raffaella Neri, Full Professor in Architectural and Urban Composition at the Politecnico di Milano, where she graduated. She is a member of the Collegio Docenti of the PhD program at the University IUAV in Venice, where received her doctoral degree in 1993. She entered several architectural design competitions. In 1996 she won the National Architectural Prize Luigi Cosenza. She is author and editor of several publications.

Camillo Orfeo, Architect, PhD in Urban Design UNINA, former Research fellow at DiARC_UNINA. He taught theory, composition and architectural design at the Faculties of Naples and Matera. Researcher at the DiARC_Department of Architecture, University of Naples, Federico II. He carried out theoretical and design research on issues concerning theoretical and methodological aspects of the city's architecture. He is author and editor of several publications.

Karin Templin, studied architecture and urbanism at Kent State University in Ohio and Florence, Italy and has worked on several major urban regeneration projects in Italy, the UK, and the Middle-East, focusing on the interrelationship between architecture, public space, and urban structure. She has lectured for universities throughout Europe and has held teaching positions with several universities in the US, UK, and Italy. She is author and editor of several publications.

Nuno Travasso, is an architect, PhD candidate and researcher at the group Territory Dynamics and Morphologies of CEAU-FAUP. He has been a Guest Assistant, in the areas of urban design and contemporary urban theory at Faculty of Architecture of the University of Porto and at the School of Architecture of the University of Minho. He has collaborated in the studio of José Fernando Gonçalves, and he maintains activity as a practicing architect.

Federica Visconti, MA and PhD in Urban Design and Architecture at the University of Naples Federico II. Currently Associate Professor in Architectural and Urban Composition in the Department of Architecture_DiARC of the University of Naples Federico II; coordinator of the Bachelor Degree in Architecture and member of the board of the PhD programme in Architecture and Construction_DRACo at Sapienza University of Rome. She is author and editor of several publications.
